

## ‘Cellulitis in Adults’ Collaborative Clinical Pathway

### Suitability for community IV management

Suitability for community IV management **includes**:

- patient unlikely to deteriorate
- patient's pain level under control and appropriate therapy commenced
- patient's general health, especially cognitive capacity, is suitable
- patient's social circumstances are supportive of community IV therapy
- patient has access to a telephone 24/7
- no safety issues for nursing staff or patient to community IV therapy
