# Antivirus

ANTIVIRUS

Antivirus is a kind of software used to prevent, scan, detect and delete viruses from a computer. Once installed, most **antivirus** software runs automatically in the background to provide real-time protection against virus attacks - Verizon

Talk to your IT provider about your antivirus protection

Is Windows Defender enough?

Windows Defender comes built in with Windows 10

It has lots of good features	But it only has
Real-time threat detection	Phishing protection for Internet Explorer and Edge
Firewall & network protection	URL filtering for Internet Explorer and Edge
Protection against phishing sites	And it has too many false positives
System performance reports.	And requires a separate extension for Chrome
Hardware security	And it is not specialized malware, spyware and virus software
Parental controls	And low risk malware like Adware can go detected

WINDOWS DEFENDER IS NOT ENOUGH for use in business where sensitive transactions and information are involved → Keep this for home use
