eFaxing

FAXING

MoH requirements

1. New analogue fax machines **should not be purchased**, with immediate effect

2. Health agencies should implement one of the following digital alternatives to the use of analogue fax for external communication - MoH

Why?

Potential privacy breach – patient data visible on faxes received

Old technology = being decommissioned

Digital alternatives:

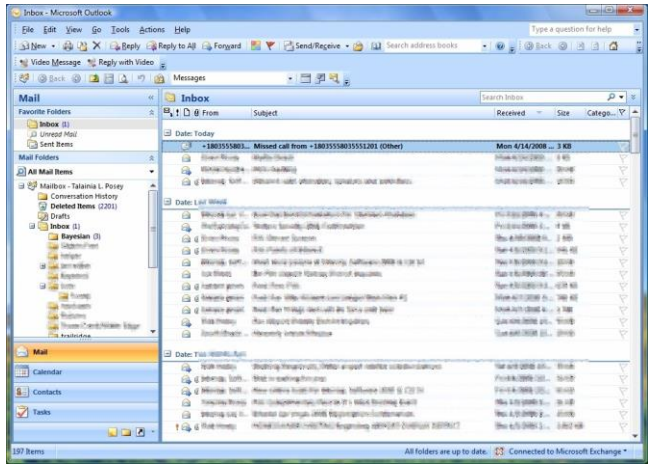
eFaxing = send and receive fax via email

Or no faxing = secure email → secure email

eFAXING

What does it look like?	For you	For your clients/suppliers
Sending faxes	You receive faxes to an email inbox set up for this purpose	Nothing changes
Receiving faxes	To send a fax you will create an email and send it to an email address set up for this purpose	Nothing changes

eFAXING



Sender sends fax to your number as usual
You receive the fax as an email

Create email and send to
faxnumber@faxserviceprovider.co.nz
e.g. 063545678@eFax.spark.co.nz

The transition to efaxing is easy and low cost
